Title: Indexing and Slicing

Aim:

To access elements, rows, columns and sub-arrays of a NumPy array using indexing and slicing.

Algorithm:

1. Start.
2. Import NumPy and create a 2-D array.
3. Access a single element using `arr[row, col]`.
4. Extract rows, columns and sub-arrays using slicing (`arr[start:stop, start:stop]`).
5. Display the results.
6. Stop.

Program :
